List of Geographic Articles Published in the Proceedings of the Oklahoma Academy of Science, Vols. 1 - 42

JOHN W. MORRIS, University of Oklahoma, Norman

A total of 139 articles dealing with geographic topics have been published in the Proceedings (Vol. 1 - 42) since it first appeared in 1920. Some 77 different authors have made their contributions. Admittedly all papers have not been presented before the Geography Section as that group was not organized until 1952. Thus, many titles have been published under such headings as biology, geology, physical science, and social science. Some are lectures given by presidents of the Oklahoma Academy of Science or by invited guests.

The article "Physiographic History of the Arbuckle Mountains," by Samuel Weidman, published in Volume 2, was the first geographic article to be published. The number of geographic contributions increased greatly with the establishing of the Geography Section. Since 1952, 77 geographic articles have been published.
