

POLICIES OF THE *PROCEEDINGS*

The *Proceedings of the Oklahoma Academy of Science* contains papers on topics of interest to scientists. The goal is to publish clear communications of scientific findings and of matters of general concern for scientists in Oklahoma, and to serve as a creative outlet for other scientific contributions by scientists. ©2024 Oklahoma Academy of Science

The *Proceedings of the Oklahoma Academy of Science* contains reports that describe the results of original scientific investigation (including social science). Papers are received with the understanding that they have not been published previously or submitted for publication elsewhere. The papers should be of significant scientific quality, intelligible to a broad scientific audience, and should represent research conducted in accordance with accepted procedures and scientific ethics (proper subject treatment and honesty).

The Editor of the *Proceedings* expects that the author(s) will honor the following principles of the scientific community, which are also policies of the *Proceedings*.

1. Each author shall have contributed substantially to major aspects of the planning, execution, and /or interpretation of the study and to the preparation of the manuscript. It is assumed that all listed authors concur in the submission, that final copy of the manuscript has been seen and approved by all authors, and that all authors share responsibility for the paper.
2. Submission of manuscripts based on unique material (e.g. cloned DNAs; antibodies; bacterial, animal, or plant cells; hybridomas; viruses; and computer programs) implies that these materials will be available for noncommercial purposes to all qualified investigators.
3. Authors of manuscripts reporting nucleic acid sequence(s) must be prepared to submit relevant data to GenBank. Authors of manuscripts reporting crystallographic studies must be prepared to submit the relevant structural data to the Protein Data Base and/or other appropriate repository. Information necessary for retrieval of the data from the repository will be specified in a reference in the paper.
4. Manuscripts that report research involving human subjects or the use of materials from human organs must be supported by a copy of the document authorizing the research and signed by the appropriate official(s) of the institution where the work was conducted. Research involving humans and animals must have been performed in accordance with the recommendations from the Declaration of Helsinki and the appropriate guidelines of the National Institutes of Health.
5. Submission of manuscripts that report research on/with recombinant DNA implies that the relevant physical and biological containment levels conformed to the guidelines of the National Institutes of Health; the Editor may request proof to substantiate this implication.
6. The *Proceedings* does not publish statements of priority or novelty, or mere descriptions of work in progress or planned. The dates of manuscript receipt, revision, and acceptance will be published.
7. A primary research report must contain sufficient details and reference to public sources of information to permit other scientists to repeat the work.
8. Any unusual hazard encountered or anticipated in using chemicals, equipment, or procedures in the investigation should be clearly identified in the manuscript.
