

A NEW ECHINOID HORIZON

*J. T. McCORMACK**Director of Geology, A. and M. College, Stillwater, Oklahoma*

ABSTRACT

Echinoids of the genus *Epiaster*, *Micraster*, and *Ennalaster* have been found in the Cretaceous of Marshall County five miles east and one mile north of Madill, on the farm of E. Morris and on the land adjoining it to the east. There are possibly two new species among these.
