SOME PROTOZOA OF OKLAHOMA TERMITES

M. Payne and A. O. Weese, Norman

(Abstract)

Fourteen species of Protozoa belonging to ten genera of Mastigophora were identified from the digestive tract of *Leucotermes flavipes*. It was found that termites would not live more than 48 hours at summer room temperatures (90 to 100°F.). Under these conditions the animals were almost completely defaunated in 24 hours.
