**A Preliminary Survey of the Cerambycids  
(Insecta: Coleoptera) of Oklahoma**

**DONALD R. ALEXANDER, University of Oklahoma, Norman**

The purpose of this preliminary list is to acquaint those interested with the various species of cerambycid beetles known to occur in Okla-

homa. The author hopes this list will direct interest toward this neglected family of Coleoptera in Oklahoma.

The author has been collecting and recording the species of cerambycids in Oklahoma since June, 1953. Data were obtained from the following sources:

CSTC	Central State Teachers College	Edmond, Okla.
DRA	D. R. Alexander Collection	
OSU	Oklahoma State University	Stillwater, Okla.
SSC	Southwestern State College	Weatherford, Okla.
UOBS	University of Oklahoma Biological Station	Willis, Okla.
UOMZ	University of Oklahoma Museum of Zoology	Norman, Okla.

In 1938, Knull described *Typocerus standishi* from Atoka, Delaware and Leflore counties. The description of this new species lists allotypes from Sherwood, Oklahoma and paratypes from Flint and Atoka. Hopping (1940) described *Toxotus oklahomensis* from Oklahoma. Knull (1944) described *Goes pulcher* var. *fuscatus* from McCurtain County. The allotype was listed from Pine Valley (Leflore County), Oklahoma. The specimens collected by Hovey (1940), in his Studies on *Chion cinctus* (Drury), were deposited in the Oklahoma State University Collection. Ortenburger and Hatch (1926) recorded five species and one subspecies from southeastern Oklahoma. Part of the collection was retained by Melville H. Hatch, and the remainder was deposited in the University of Oklahoma Museum of Zoology. In Knull (1946) there are keys to 90 species and one variety known to occur in Oklahoma.

In this list the author has included 150 species, 4 subspecies and 3 varieties. Of this number, only 10 have been recorded previously from Oklahoma. This number will no doubt increase with further collecting and observation.

In the following list, abbreviations given above designate in what collection an example from any given county may be found. If no abbreviations are listed, the data are in the literature cited. For convenience, the species have been arranged in alphabetical order.

The author would like to express his appreciation to Dr. Cluff E. Hopla, Dr. Charles C. Carpenter, and Dr. Arthur N. Bragg, University of Oklahoma, Dr. D. E. Howell, Oklahoma State University, and Otis M. King, Southwestern State College, without whose kind assistance this paper would not have been possible.
