

FIRST OCCURRENCES OF THE PENNSYLVANIAN
CRINOID GENUS SYNEROCRINUS IN
NORTH AMERICA

L. R. Laudon, *Tulsa, Oklahoma*
(Abstract)

A single large excellently preserved specimen of the genus *Synerocrinus* was collected by Parish of the Sinclair-Prairie Petroleum Corporation from the Bostwick conglomerate approximately 300 feet above the Otterville limestone near Ardmore, Oklahoma. The genus has been heretofore confined to base of the Pennsylvanian (Moscowian) of Russia and the Hurlet limestone of Scotland.
