On 8 April 2005, I was notified by Ford Hendershot of an Inca Dove (*Columbina inca*) nest at the home of Robert Goolsby in Idabel, McCurtain County, Oklahoma. The nest was 1.2 m above the ground in an evergreen cleyera shrub (*Eurya ochracea*), where I observed an Inca Dove on the nest containing 2 eggs. I saw a dove and 2 unhatched eggs in the nest on 14 April. On 19 and 24 April, the nest held 2 nestlings (Fig. 1a), and on 2 May, the nest was empty. I contacted Goolsby to determine if he had more information. He had photographed the nest with 1 adult and 2 fully-feathered nestlings on 1 May about 1430 h and later that afternoon observed 1 of the fledglings flying weakly and attempting to land on the window ledge by the nest. On 5 May, I collected the nest (Fig. 1b) for the Sam Noble Oklahoma Museum of Natural History, University of Oklahoma (UOMNH N320). The nest, which measured 113.4 mm x 91.0 mm, was constructed atop an old stick nest, probably of a Northern Mockingbird (*Mimus polyglottos*) (G. Schnell, pers. comm. 2005). Its composition included horse hair, pine needles (*Pinus* sp.), and downy feathers, and the rim of the nest was lined with excrement (A. Person, pers. comm. 2005). The excrement around the rim, which is typical of an Inca Dove nest, "...binds the nest material and deepens the cup" (Mueller, A. J. 1992. Inca Dove. The Birds of North America, No. 28 [A. Poole, P. Stettenheim, and F.

Fig. 1. a) Inca Dove (*Columbina inca*) squabs in nest, 19 April 2005, Idabel, McCurtain Co., Oklahoma and b) Inca Dove nest collected on 5 May 2005, Idabel, McCurtain Co., Oklahoma nest was deposited in the University of Oklahoma Museum of Natural History (UOMNH N320). Photographs by Berlin Heck.

Gill, Eds.]. The Academy of Natural Sciences, Philadelphia and The American Ornithologists' Union, Washington, D.C.).

The first Inca Dove recorded in Oklahoma was in Kay County from December 1954 to March 1955 (Sutton, G. M. Oklahoma Birds. University of Oklahoma Press, Norman). That same year a female was observed and collected on 17 May in Cimarron County. In subsequent years, they have been observed erratically. Inca Doves have been recorded in 19 counties in Oklahoma, with most of the recent records being from McCurtain County in the southeastern region of the state. The 1992 edition of the Date Guide to the Occurrences of Birds in Oklahoma compiled by the Oklahoma Bird Records Committee listed Inca Doves as present, but no dates were listed (Grzybowski, J., J. Arterburn, W. Carter, J. Tomer, and D. Verser. 1992. Date guide to the occurrences of birds in Oklahoma. 2nd edition. Oklahoma Ornithological Society, Norman). The 2004 edition of this booklet lists the Inca Dove as a permanent resident in 5 of the 7 geographic regions of Oklahoma, except the Panhandle and northwestern regions.

The first record of attempted nesting of Inca Doves in Oklahoma was in Hugo, Choctaw County, 23 April 2000 (Heck, B. 2001. First nesting attempt of the Inca Dove for Oklahoma. Bulletin of the Oklahoma Ornithological Society 34:4). The nest was not subsequently monitored. I observed another nesting attempt 8 May 2003, south of Haworth, McCurtain County, but a storm destroyed the nest a week later. Jim Harris of Wagoner, Wagoner County, observed an Inca Dove on a nest in 2004 but did not monitor it (J. Harris, pers. comm. 2005). Other attempted nestings have occurred in Jackson, Comanche, and Grady counties, and 2 young Inca Doves were videotaped being fed by adults in Jackson County on 9 April (Tyler, J. D. 1997. Birds of southwestern Oklahoma and north central Texas. Transcript Press, Norman, Oklahoma).

Museum specimens of Inca Doves and a nest from Oklahoma at the Sam Noble Oklahoma Museum of Natural History at the University of Oklahoma are as follows: UOMNH 2114, female, Cimarron Co., Boise City (13 mi. N), 17 May 1955, collector: G. M. Sutton; UOMNH 7517, male, Harper Co., Rosston, 15 December 1973, collector: Laurance Dunn; UOMNH 6830 (skeleton), sex unknown, Cleveland Co., Norman, 20 December 1962, collector: F. A. Rinehart; UOMNH 22009 (skeleton), sex unknown, Cleveland Co., Norman, 1 June 2004, collector: G. D. Schnell; UOMNH N320 (nest), McCurtain Co., Idabel, 5 May 2005, collector: Berlin A. Heck. A museum specimen is located at Cameron University as follows: CUMZ 0607, sex unknown, Caddo County, Apache, 31 October 1975, collector: O. J. Felis.

Received 1 June 2005; accepted 3 January 2006.

Virginia Rails Nesting in Tulsa County.—Nesting of Virginia Rails (*Rallus limicola*) in Tulsa County was confirmed in May 2005 at the Apache sewage ponds on the southwestern corner of the intersection of North 145 East Avenue and East Apache Street. These are the waste water ponds of a
